

Sustainable development goal 12:

Ensure sustainable consumption and production patterns

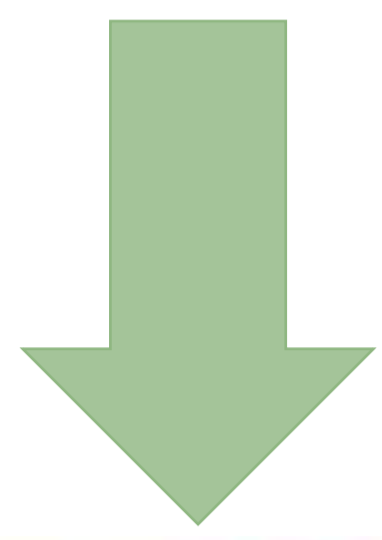

Arna, Ingeborg, Juho, Petra, Tómas, Ulf

SDG 12 is one of the UN's 17 sustainable development goals. The goals are a plan to eradicate poverty, fight inequality and stop the climate changes within 2030.

Solutions

- WE need to have a plan to try to reuse everything possible.
- Use less fossil fuels and try to use more electricity on transportation (like cars).
- People need to waste less food, and to reduce their use of fossil fuel and try to use green energy instead.
- The companies need to try to find ways to produce electricity themselves, like for example the heating system.
- As you can see, there are many solutions out there. we just need to find and use them.

Ecological sustainability of forest management

- Maintain the growth
- Preserve the biodiversity
- Keep waters clean

Safeguard natural values and wood production with high-quality environmental care.

Sustainable consumption:

- Minerals
- Wood
- Water
- Food

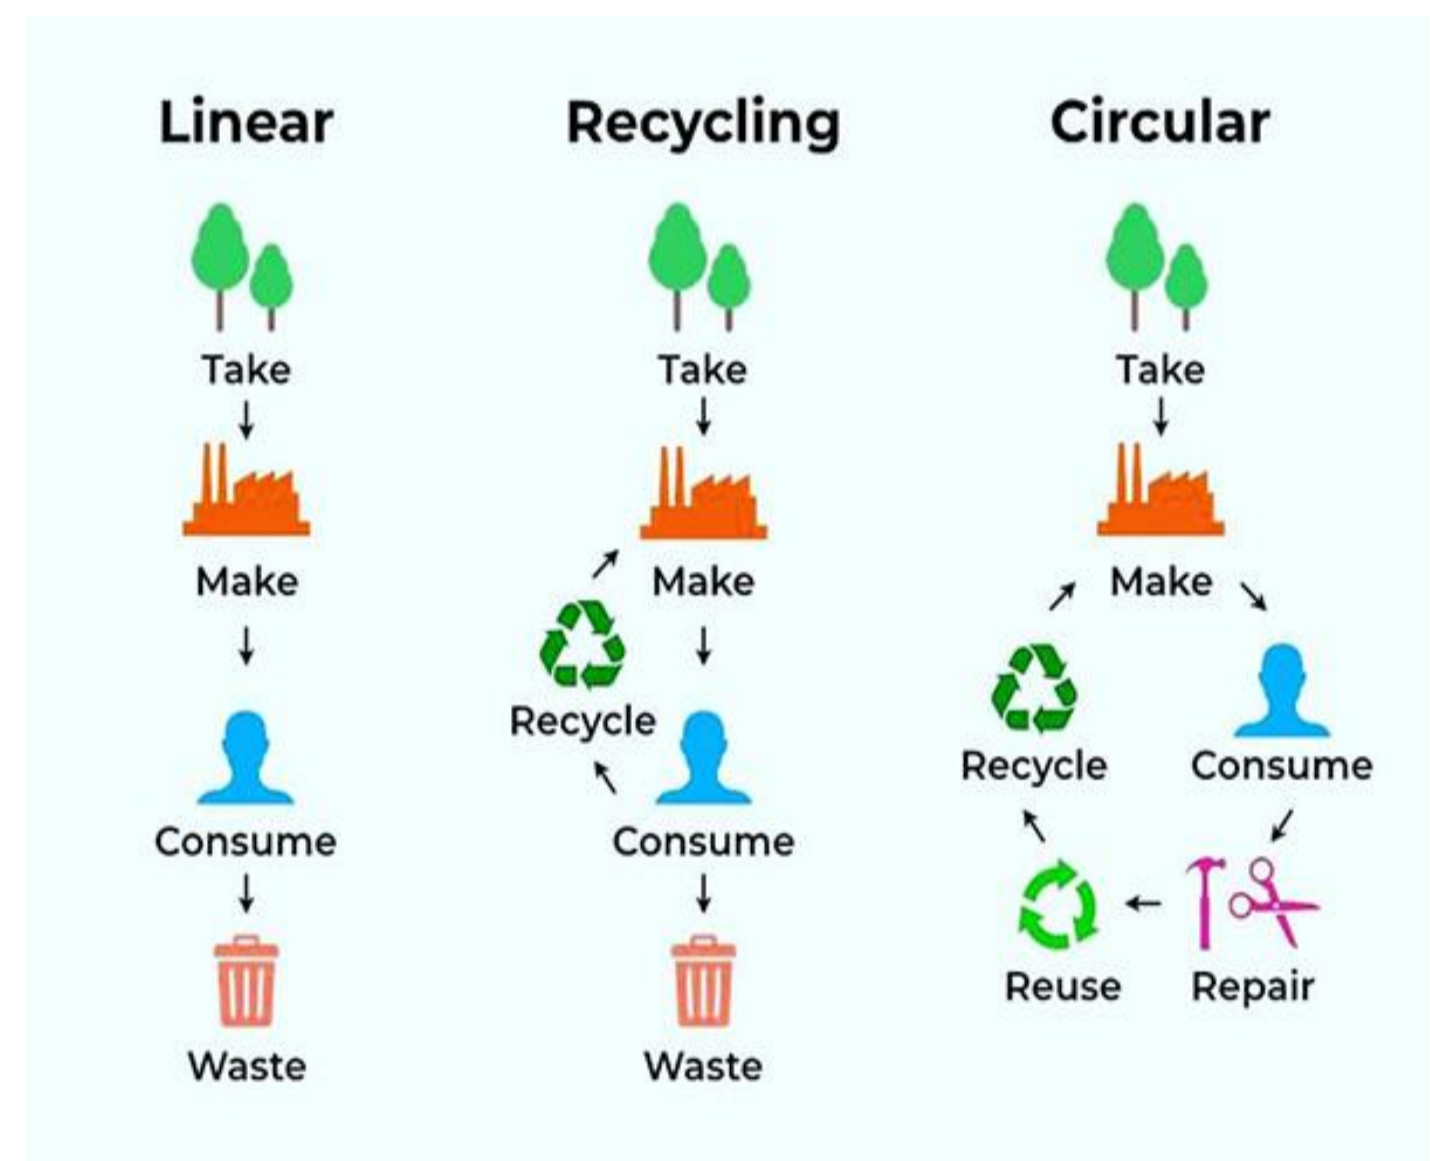

- ➔ Waste less food
- ➔ Recycle, flea market
- ➔ Sustainable forestry.

The Aim of Goal 12.1:

The point of goal 12.1 is to reduce our waste and be more energy efficient, which can be achieved with the proposed 10 Year Framework of Programmes on Sustainable Consumption and Production Patterns (SCP). The framework aims to:

- Enhance global cooperation.
- Quicken the transition to SCP patterns throughout the world.
- Encourage stakeholders to innovate and cooperate on a large scale to achieve a greater impact on the shift to SCP patterns.
